

ABSTRACT OF THE DISCLOSURE

A display apparatus comprising an LCD panel, a panel support supporting the LCD panel, a front cover disposed in front of the LCD panel, and a rear cover disposed in the rear of the LCD panel and the panel support and coupled with the front cover, further comprising at least one coupling extended from one of a rear surface of the front cover and a front face of the rear cover toward the other thereof, having an groove formed on its plane; and at least one rib formed at the other thereof, being engaged with the groove of the coupling. With this configuration, there is provided a display apparatus capable of facilitating an assembling and disassembling of the front cover and the rear cover, decreasing the time to be consumed for the assembling and disassembling. In addition, the display apparatus has slim and compact in appearance.
